HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Quatriennal Ozone Symposium Edinburgh Scotland Sept 2016

posny@univ-reunion.fr

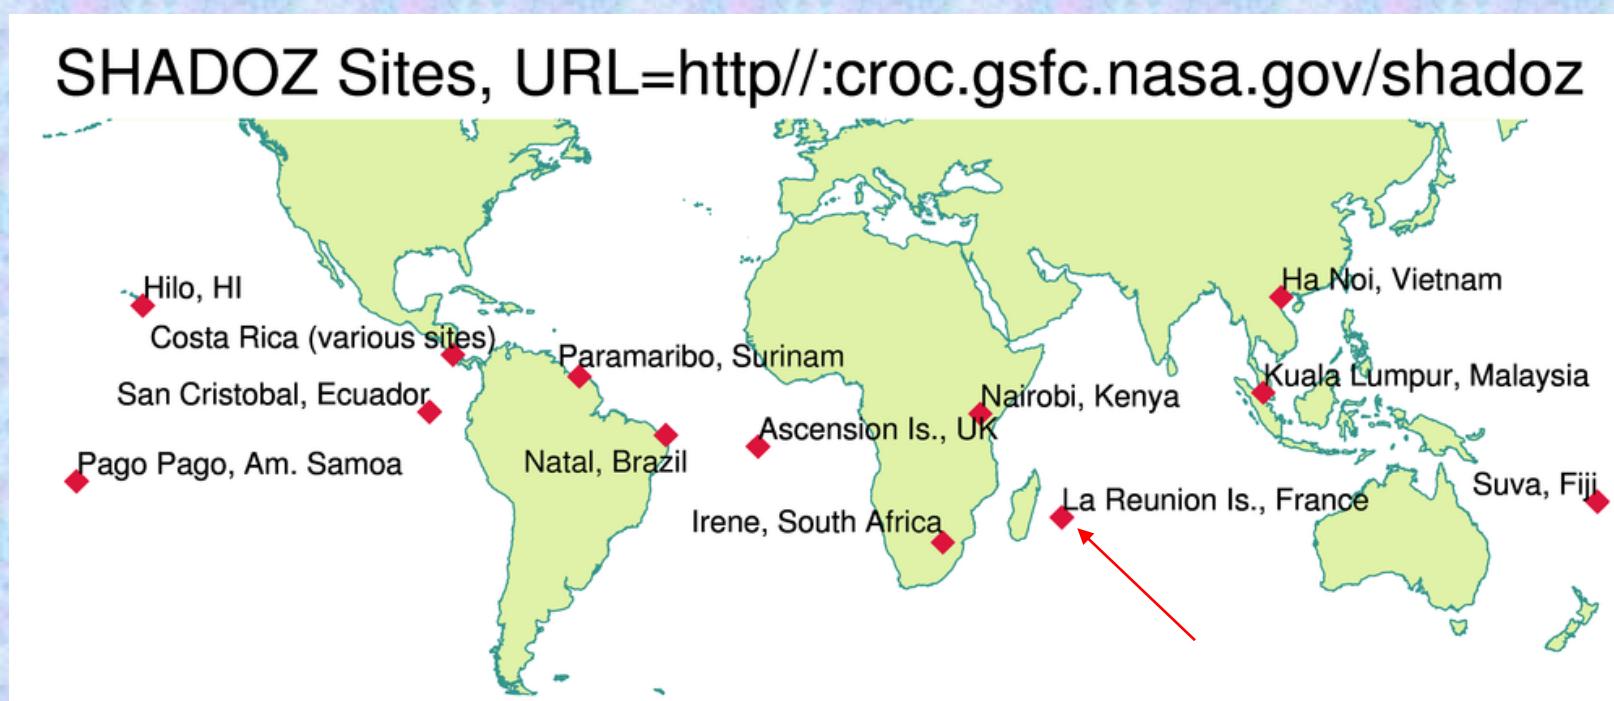

La Reunion Island (21°S, 55°) SHADOZ/NDACC station

First reprocessed ozonesonde data and comparisons with lidar measurements at the Maïdo Observatory

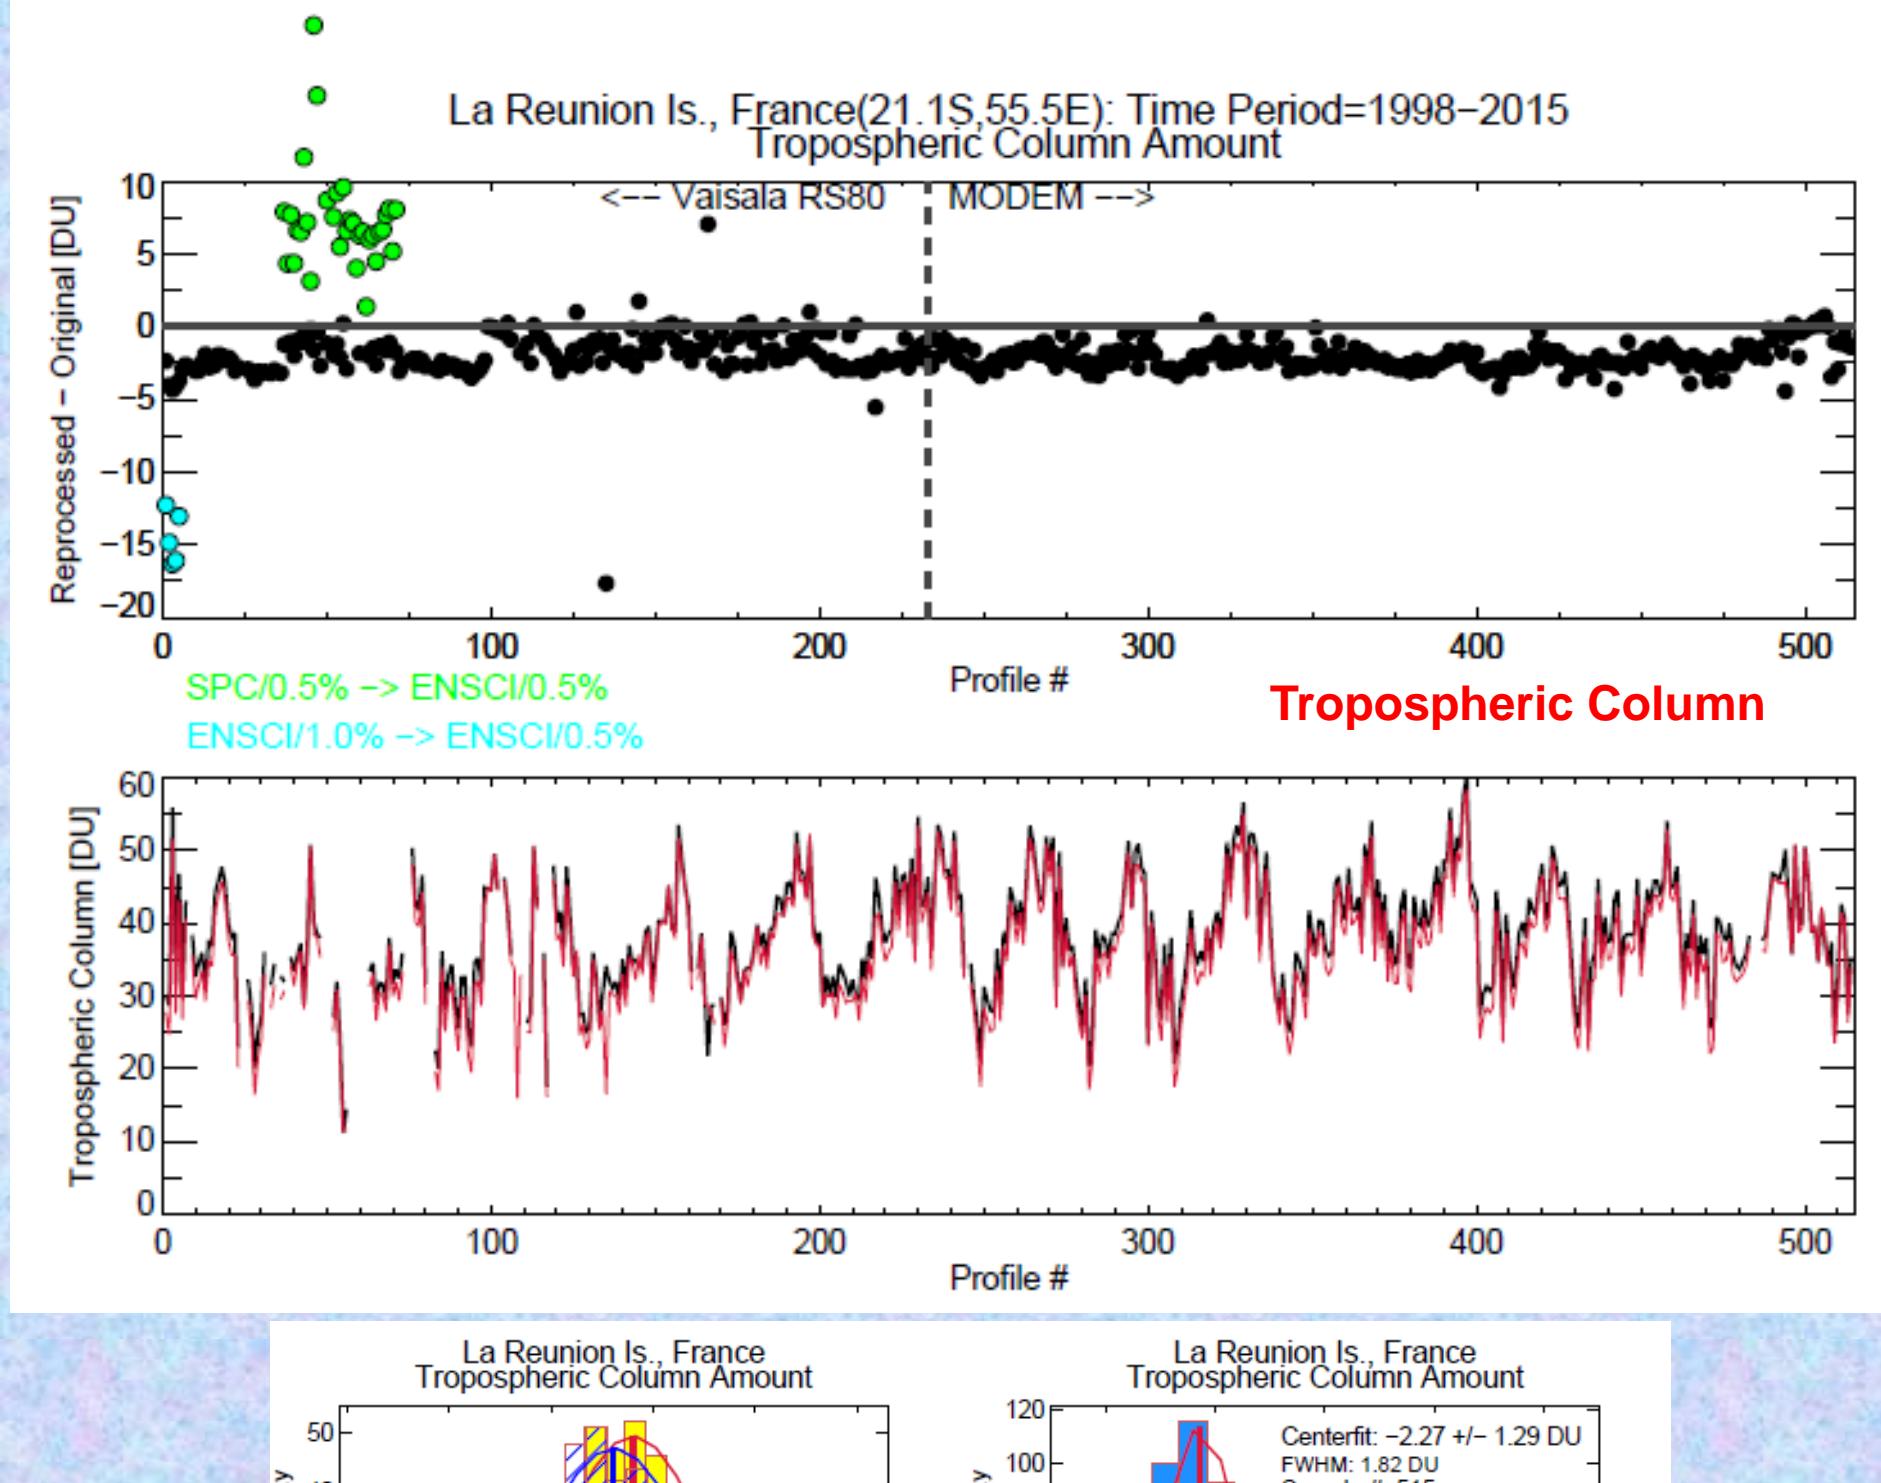

F. Posny (1), B.J. Johnson (2), J.M. Metzger (3), V. Duflot (1), T. Portafaix (1), P. Cullis (4), A.M. Thompson(5) and J.C. Witte (6)

(1) LACy/UMR 8105/La Reunion University, FR, (2) NOAA/ESRL/GMD US (3) UMS 3365, OSU-Reunion, FR, (4) CIRES at NOAA/ESRL/GMD US, (5) NASA/GSFC, US, (6) SSAI at NASA/GSFC, ACD, US.

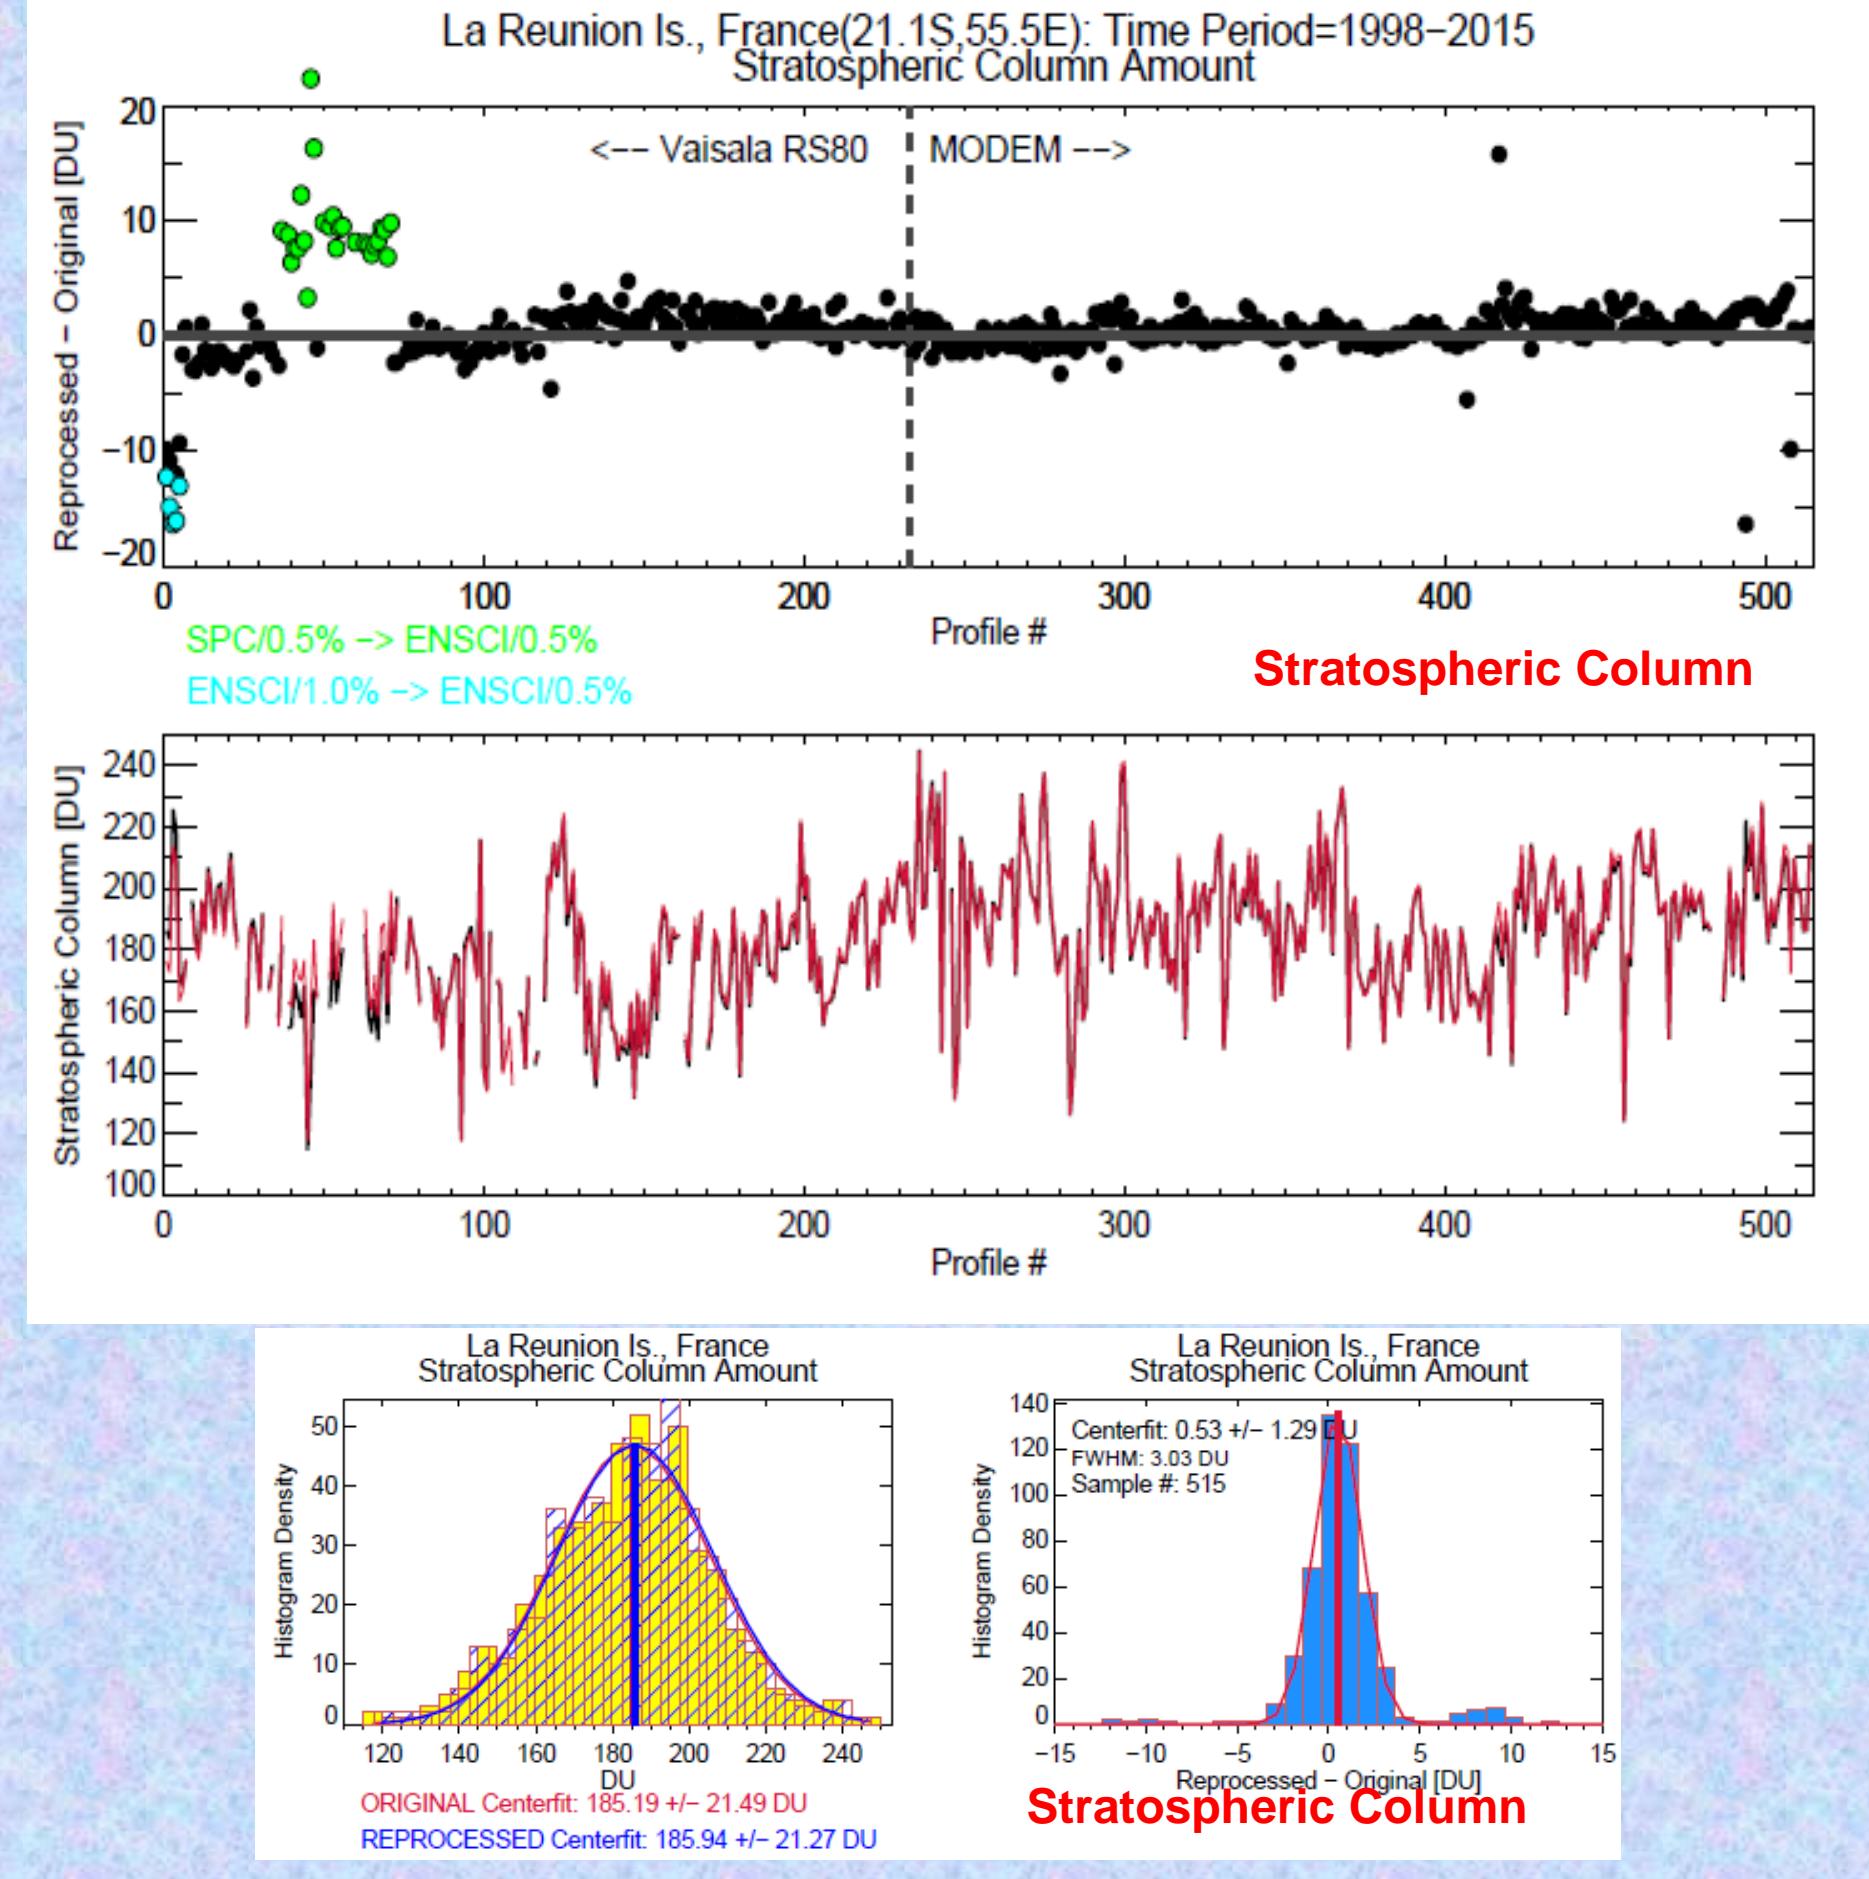

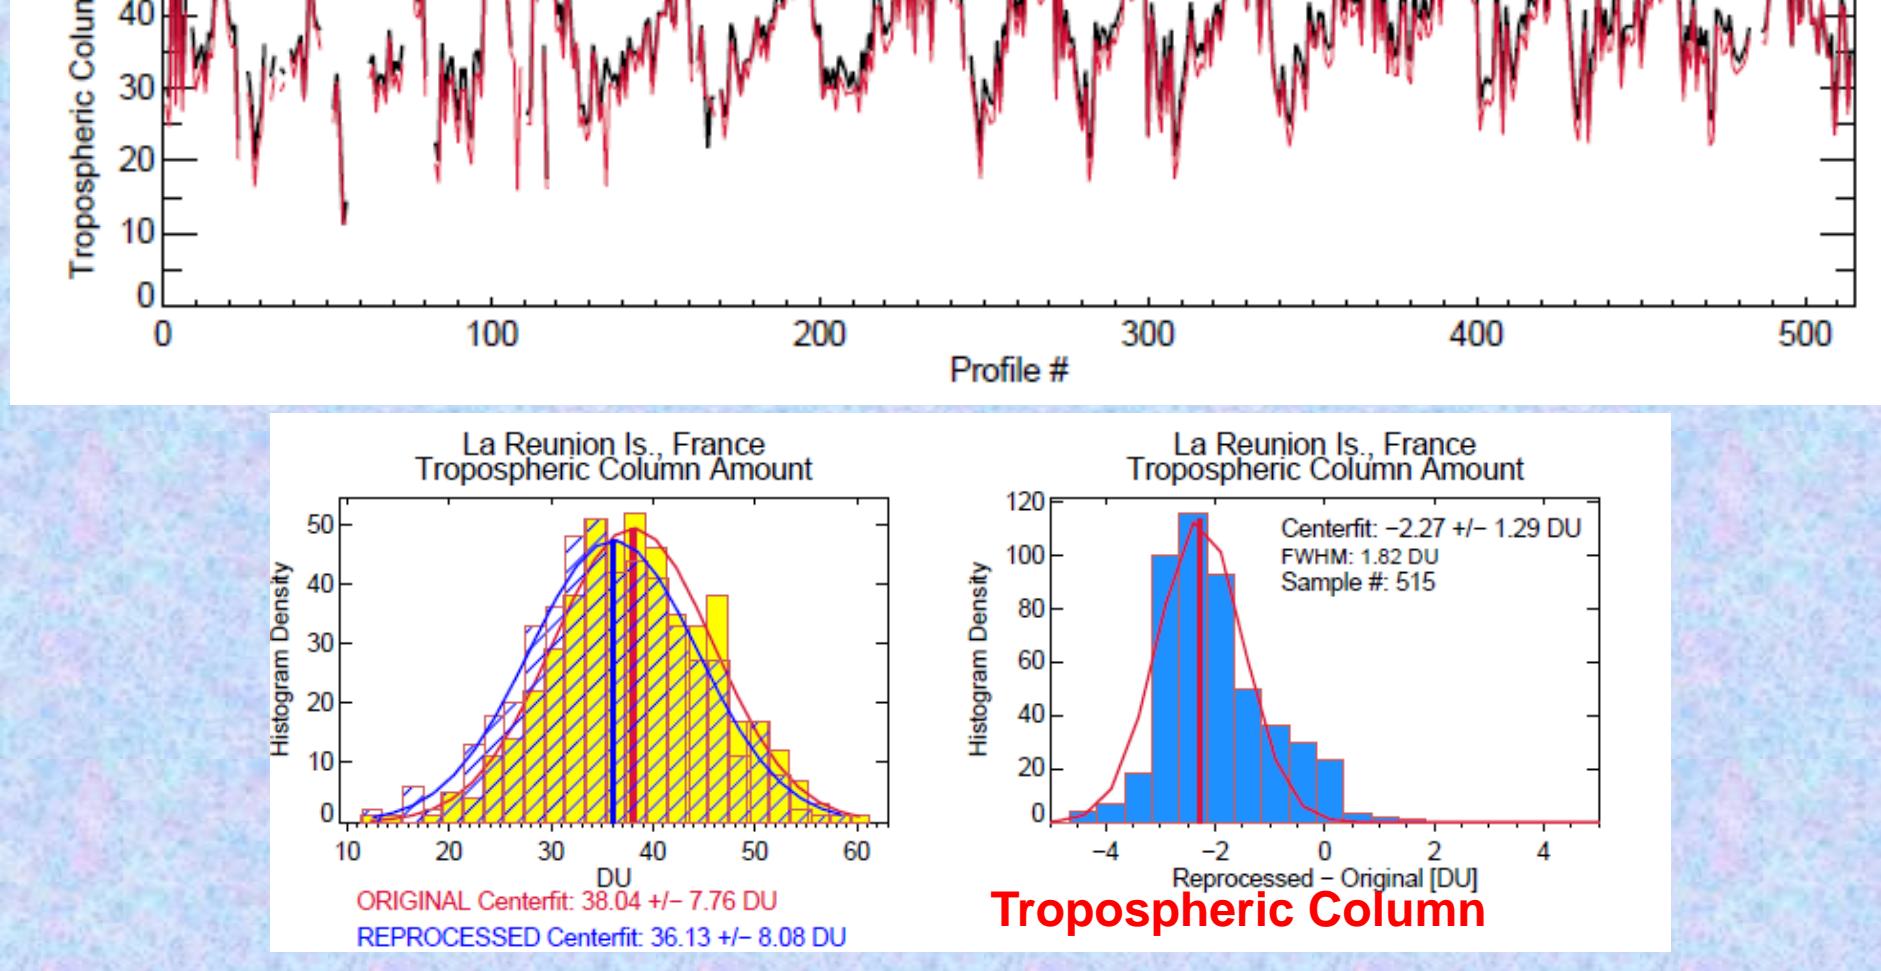

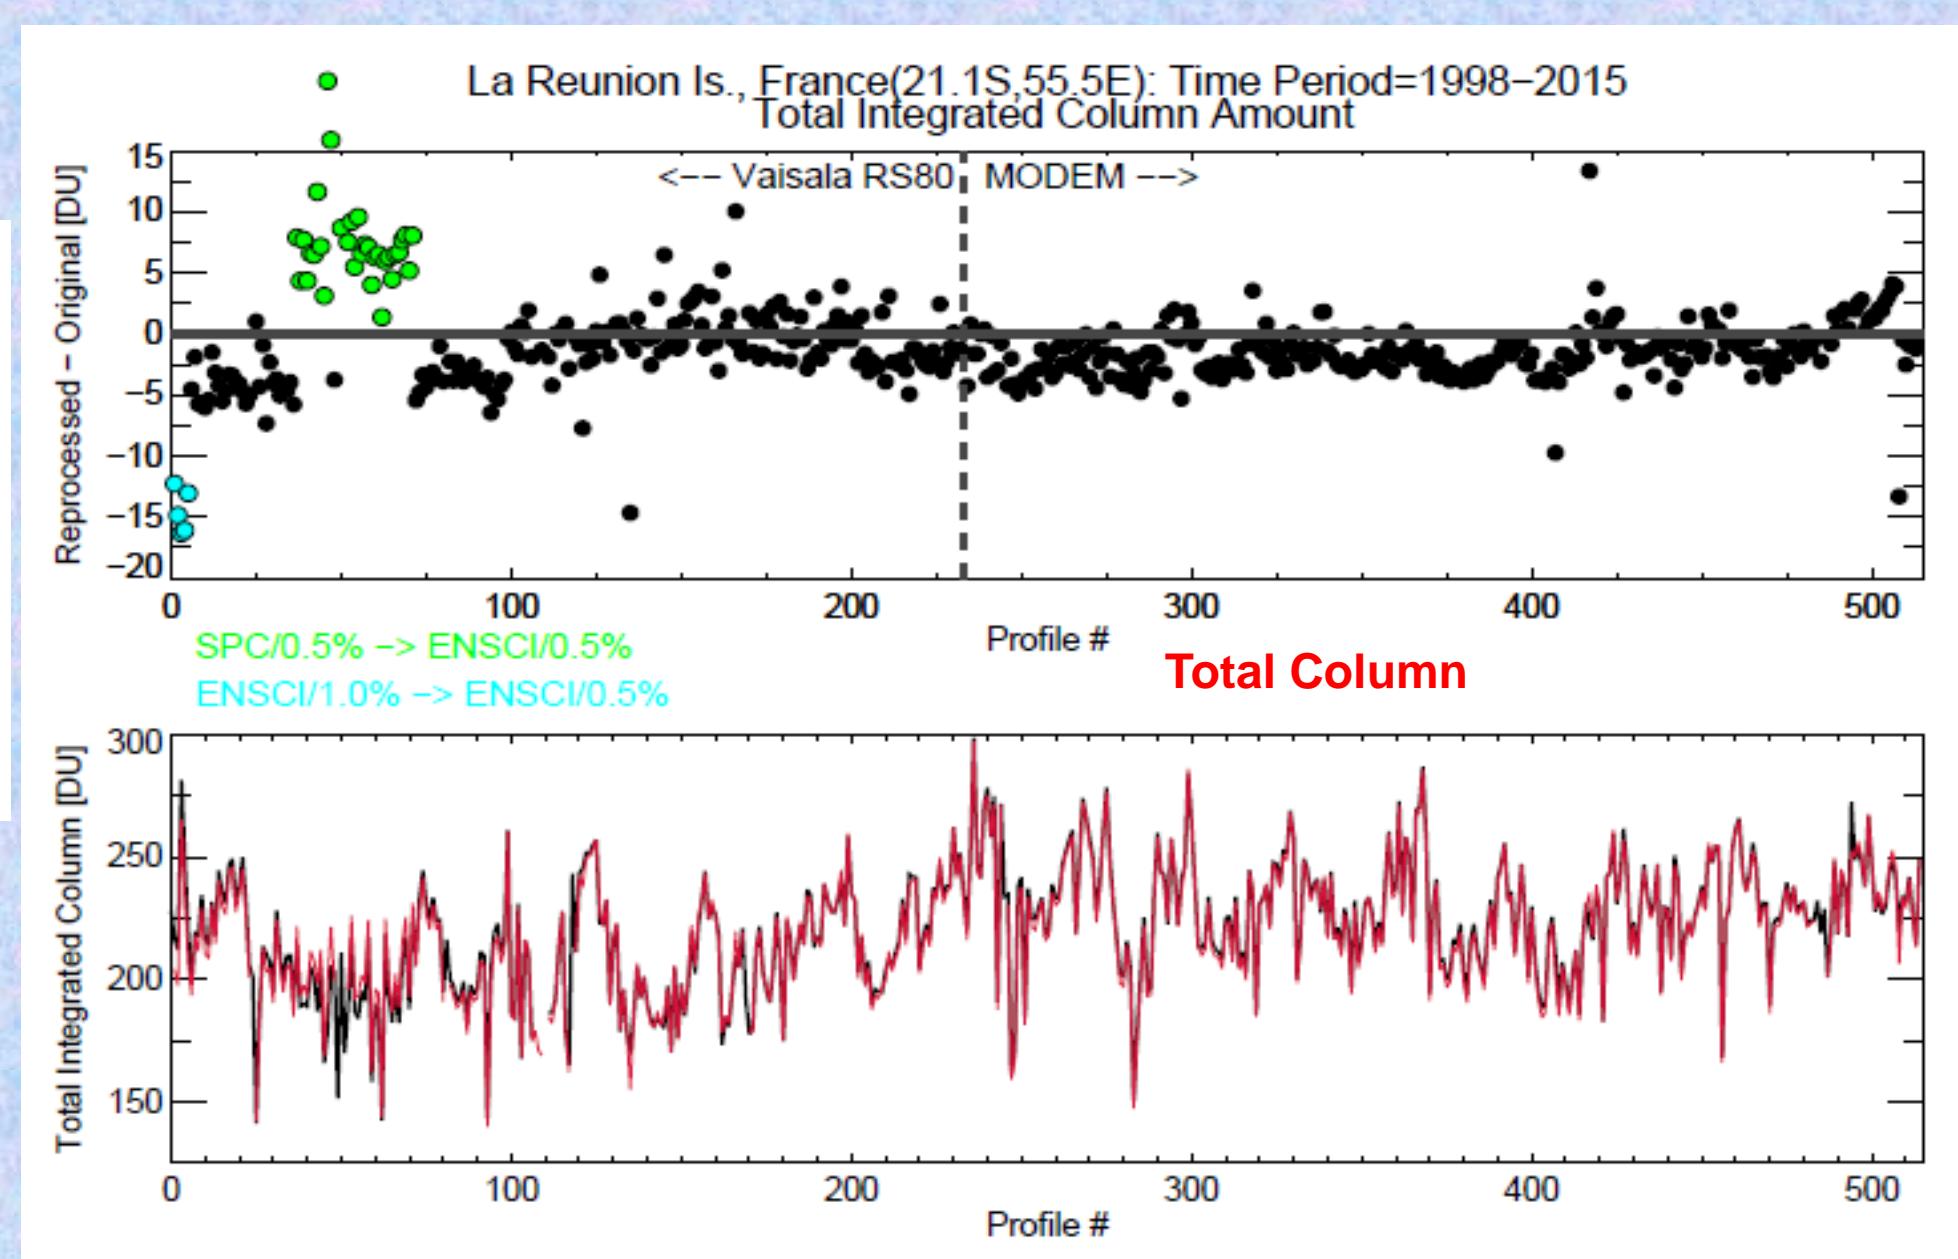

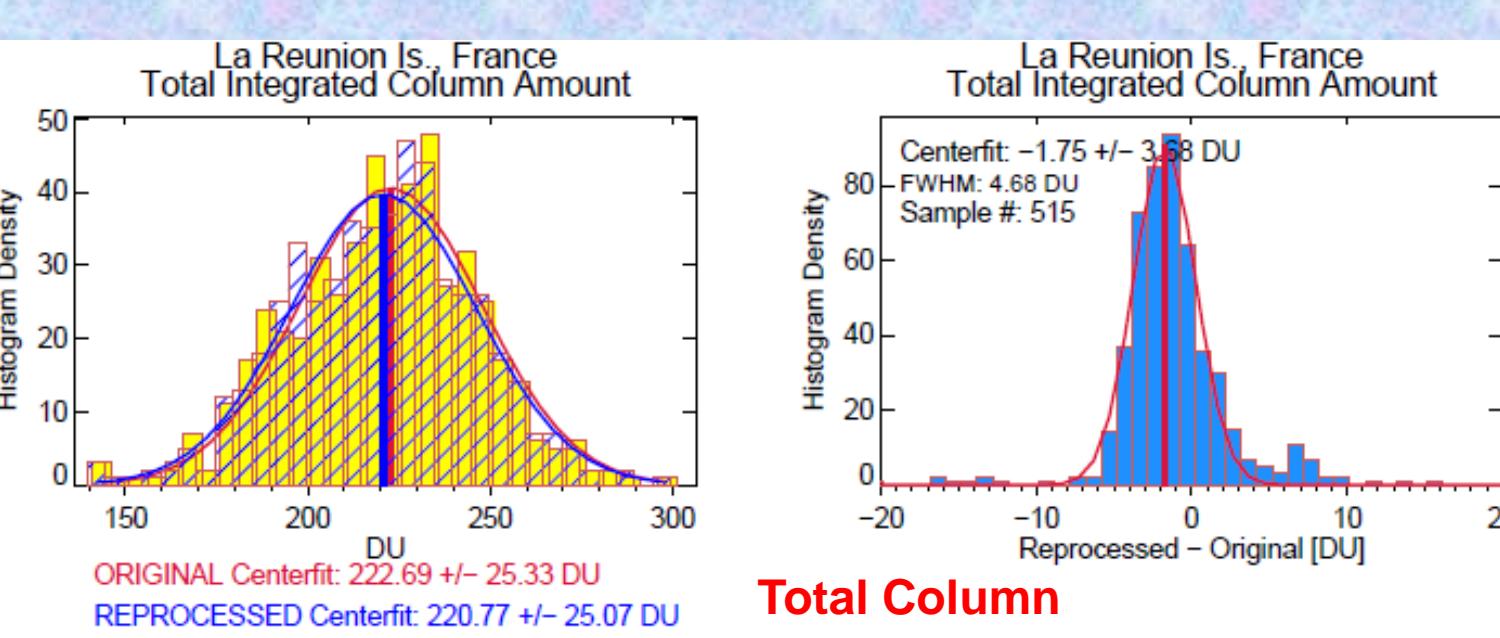

★ First reprocessed Ozone data (1998-2015)

NDACC-SHADOZ station : 20.9°S 55.5°E (Gillot airport)

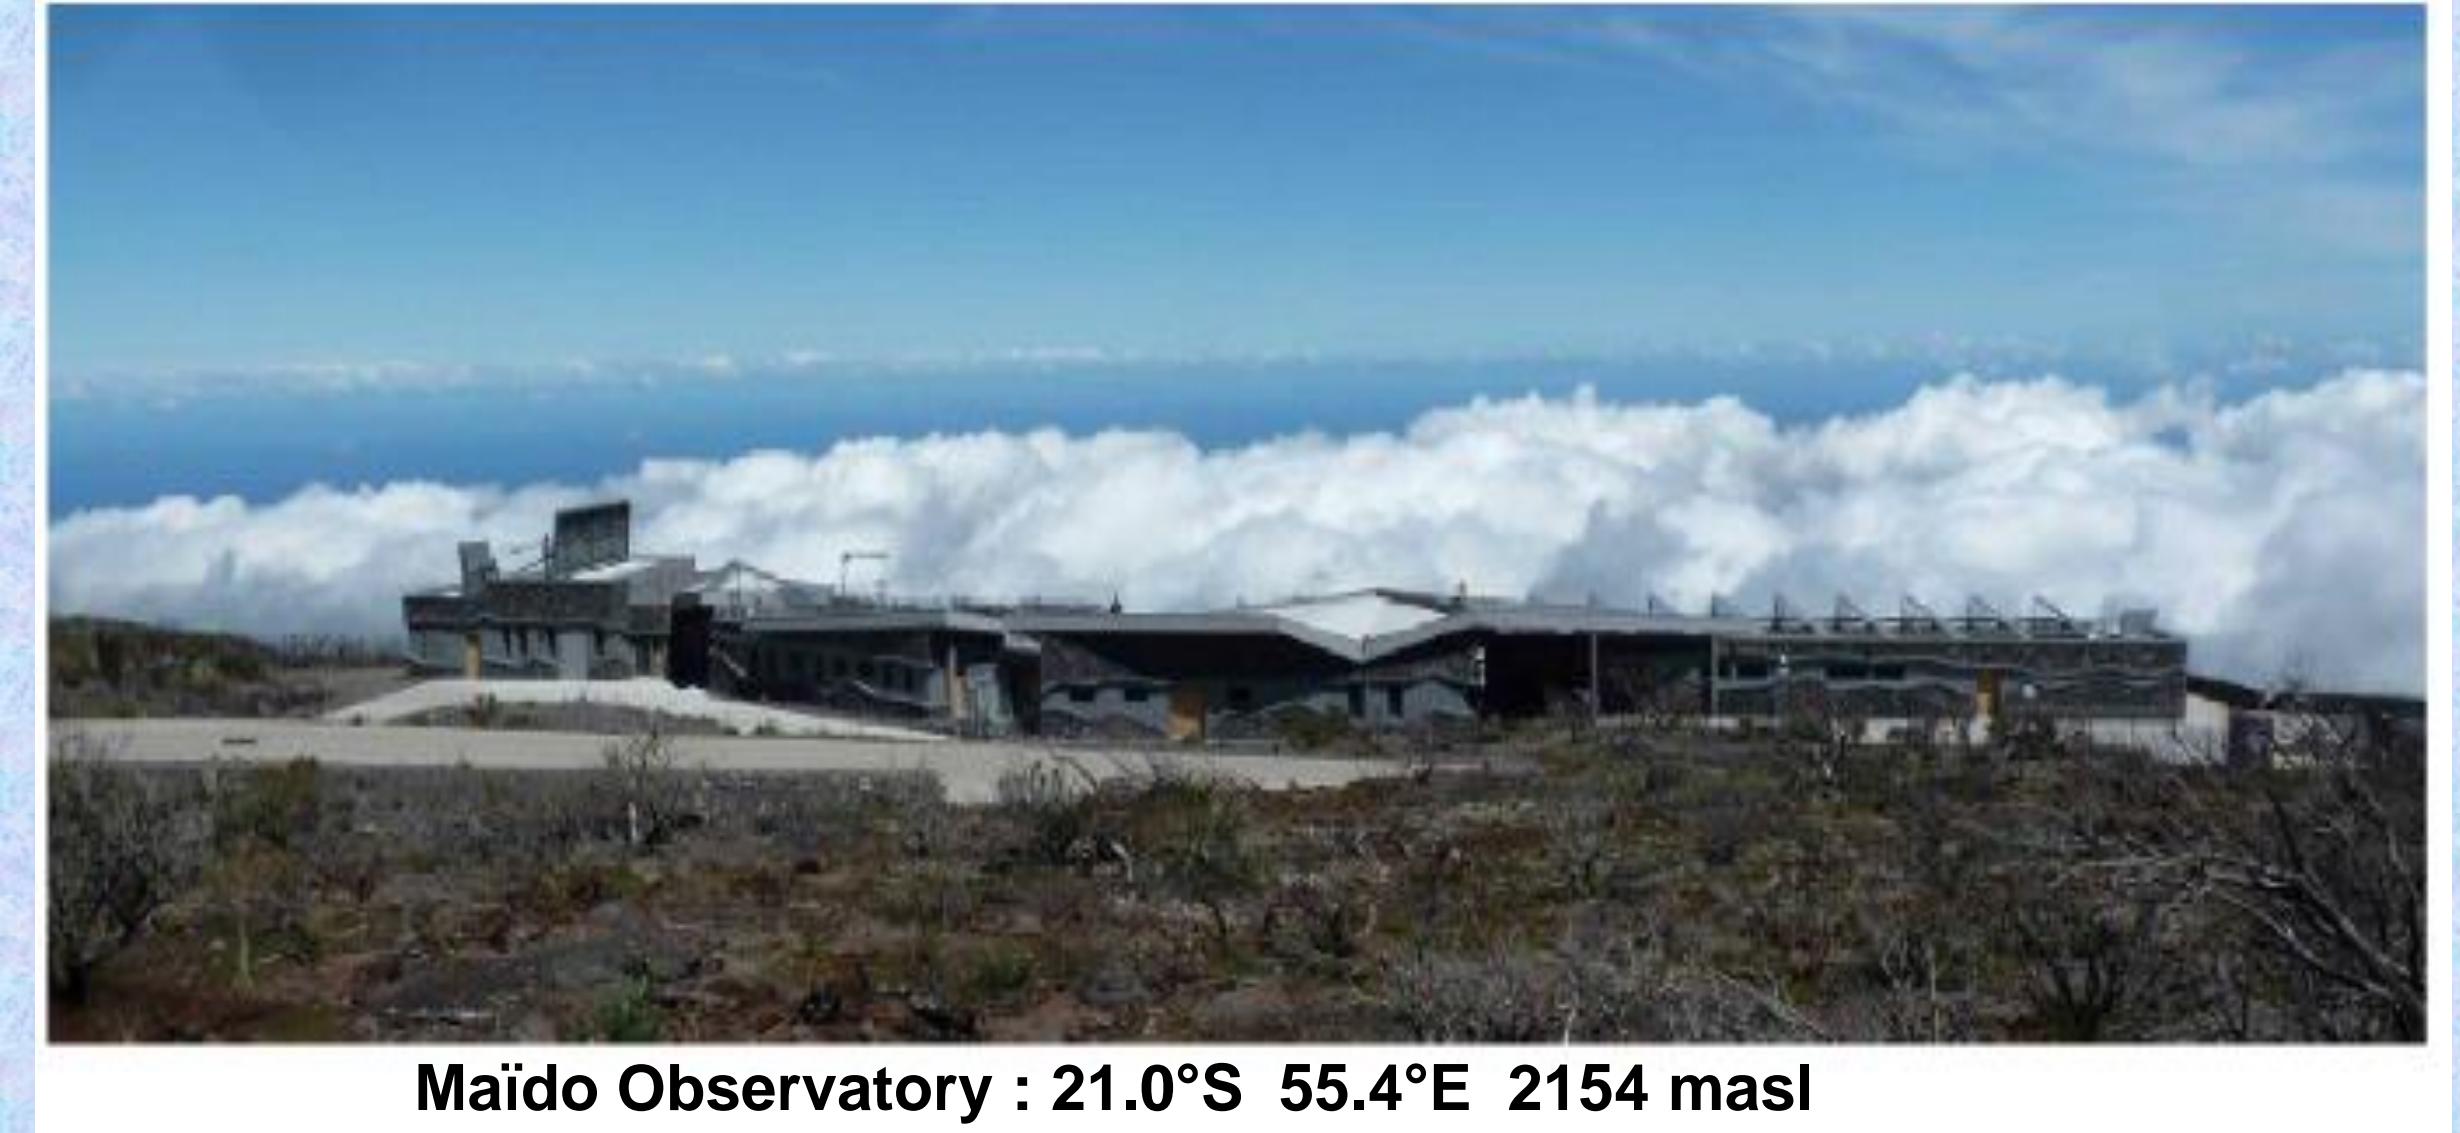

!! Preliminary results !!

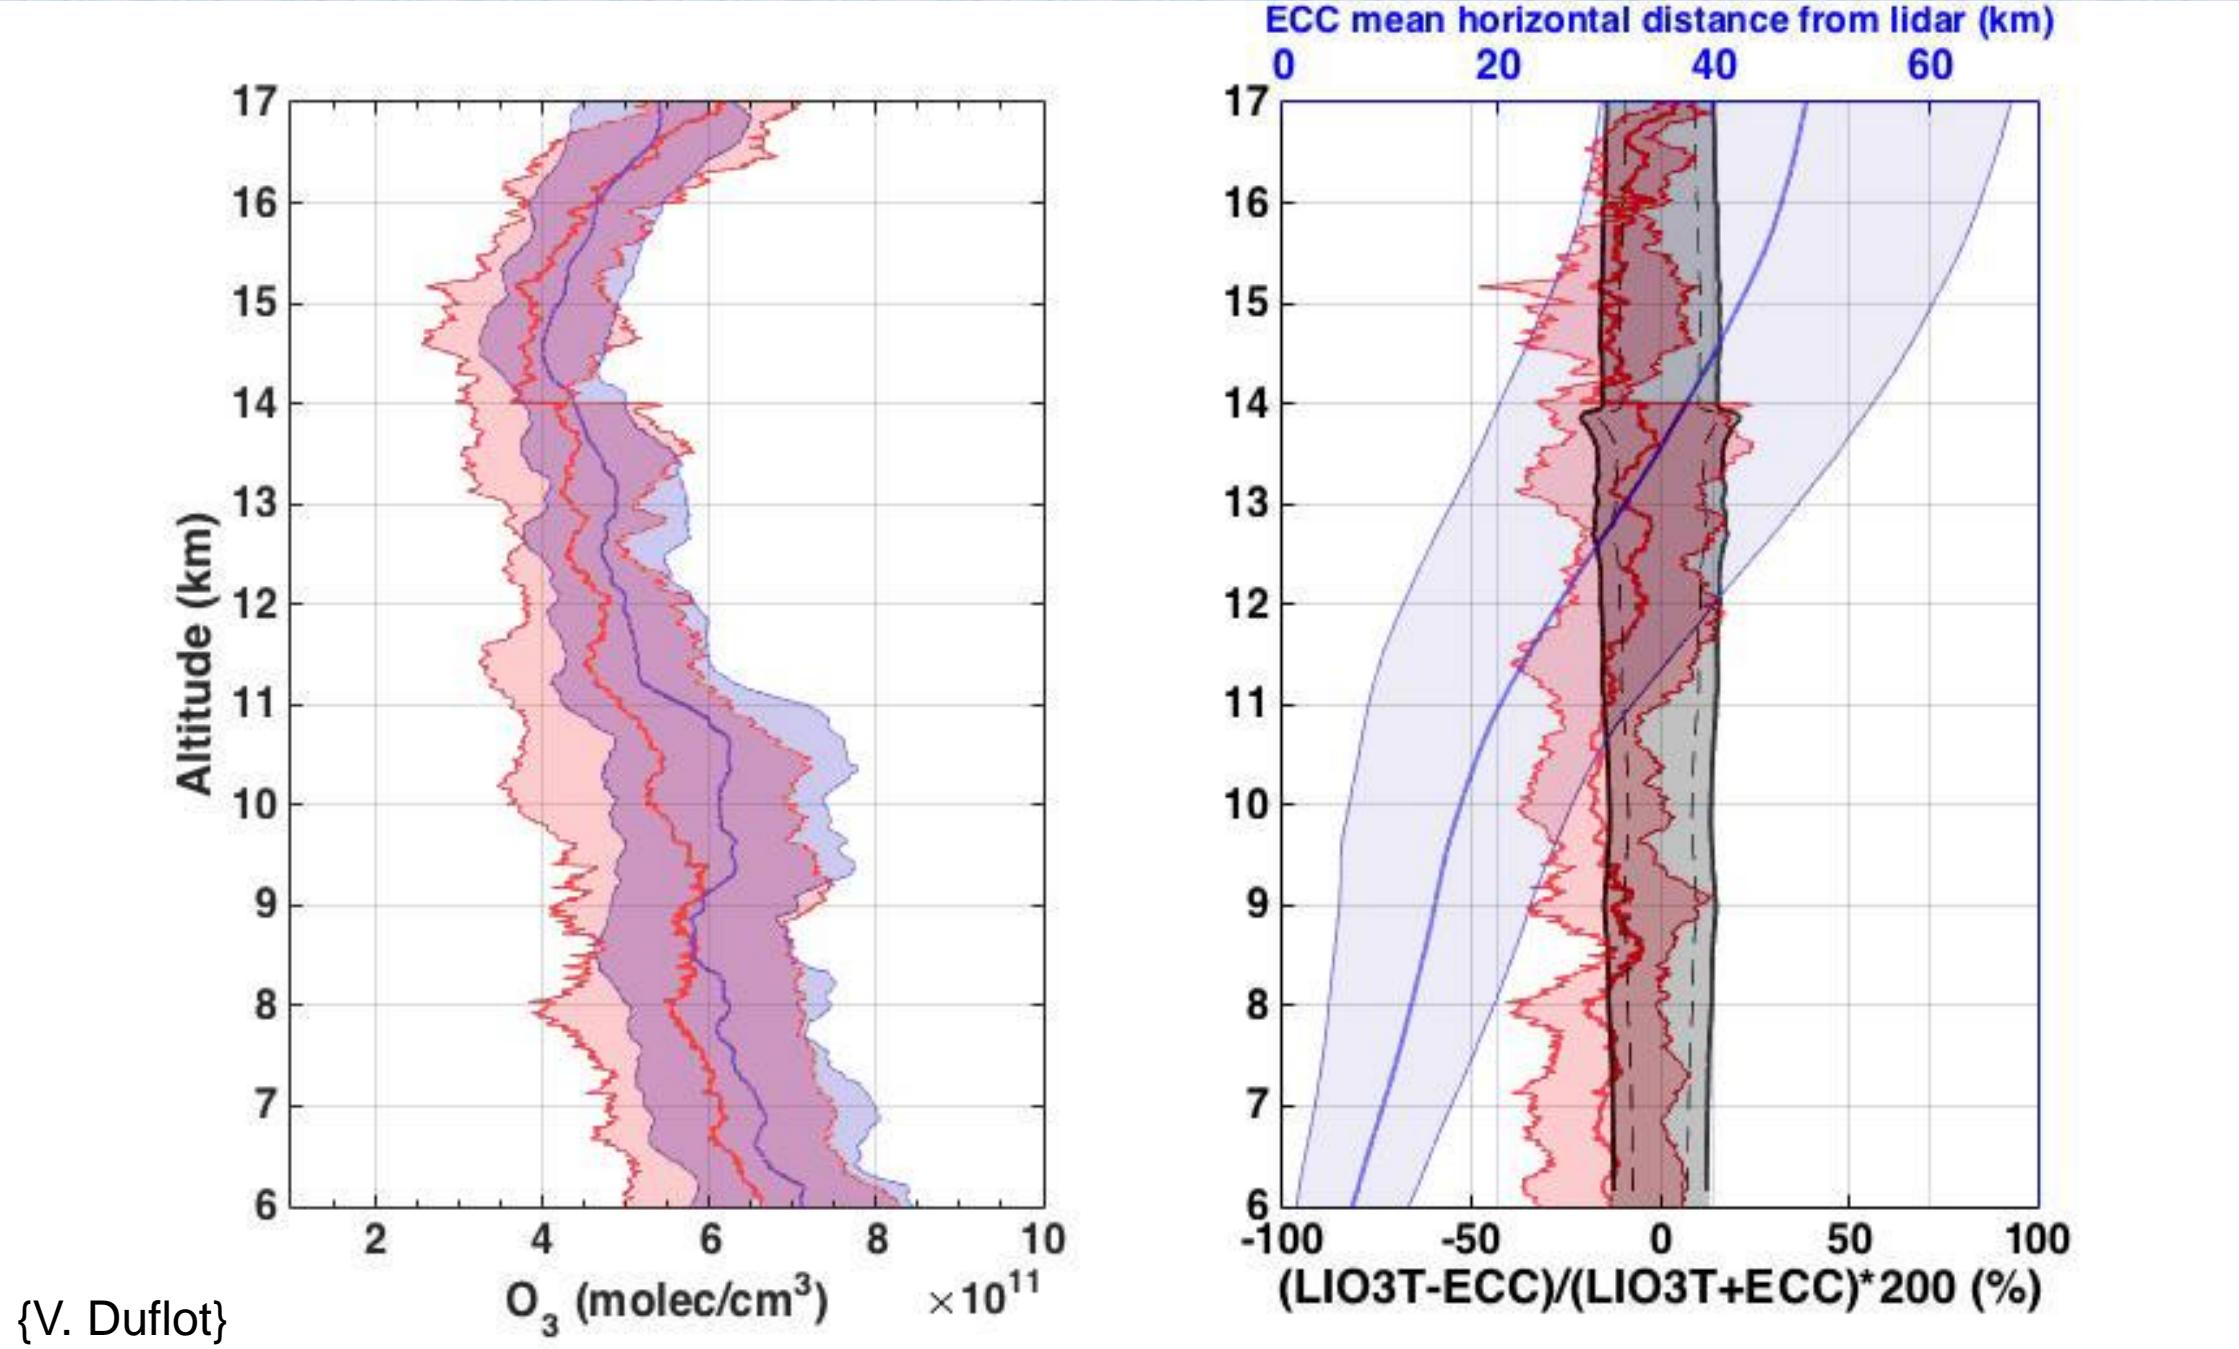

Applied Corrections			
Solution	Type	Timeline	Correction (J. Witte)
1% Full Buffer with ENSCI	First 8 records	1998	Convert to ENSCI/1% -> ENSCI/0.5%: R=0.96, P ≥ 30 hPa R=0.90+0.041Log ₁₀ (P), P < 30 hPa ENSCI/0.5% = SPC0.5% / R $\Delta S = \pm 0.05$ entire profile
0.5% Half Buffer			
Solution Volume	2.5 cc	Entire record	$\alpha(\text{absorption efficiency}) = 1.0044-4.4 \times 10^{-3}(\text{P}_{\text{air}})$, $100 < \text{P}_{\text{air}} < 1050 \text{ hPa}$
Instrument	ENSCI		
SPC with 0.5% Half Buffer	40 (1999-2000)		Convert SPC/0.5% -> ENSCI/0.5% R=0.764+0.133Log ₁₀ (P), P < 30 hPa ENSCI/0.5% = SPC0.5% / R $\Delta S = \pm 0.05$ entire profile
Background Current	IB0, IB1, and IB2 recorded but mostly not applied.		Use IB=IB2: Thresholds: IB < 0.05 μA = 0.02 μA IB ≥ 0.05 μA = 0.04 μA
PCF	4AKOMHYR1986		SAKOMHYR1995
Flowrate Correction	Not applied but Lab T, P, RH available		Used: $T=25 \pm 5$, $RH=50 \pm 25$, $P=1000 \text{ hPa}$ $1.58\%, \Delta C_{\text{obs}} = 0.003$
Pump Temperature	RS80, MODEM		None (Internal pump?)
Pressure offset	RS80 MODEM		No GPS data None (GPS altitude not available)

★ MORGANE Campaign April-July 2015 (Maïdo ObservatoRy Gas and Aerosol Ndacc Experiment) : blind test intercomparison between lidars (T°, O3, and water vapour) from OPAR and from NASA/GSFC mobile laboratory in view of the (re)labellisation of OPAR lidars in the NDACC :

Maïdo Observatory : 21.0°S 55.4°E 2154 masl

In troposphere the displacement of the sonde trajectory with respect to the laser beam position could be large !

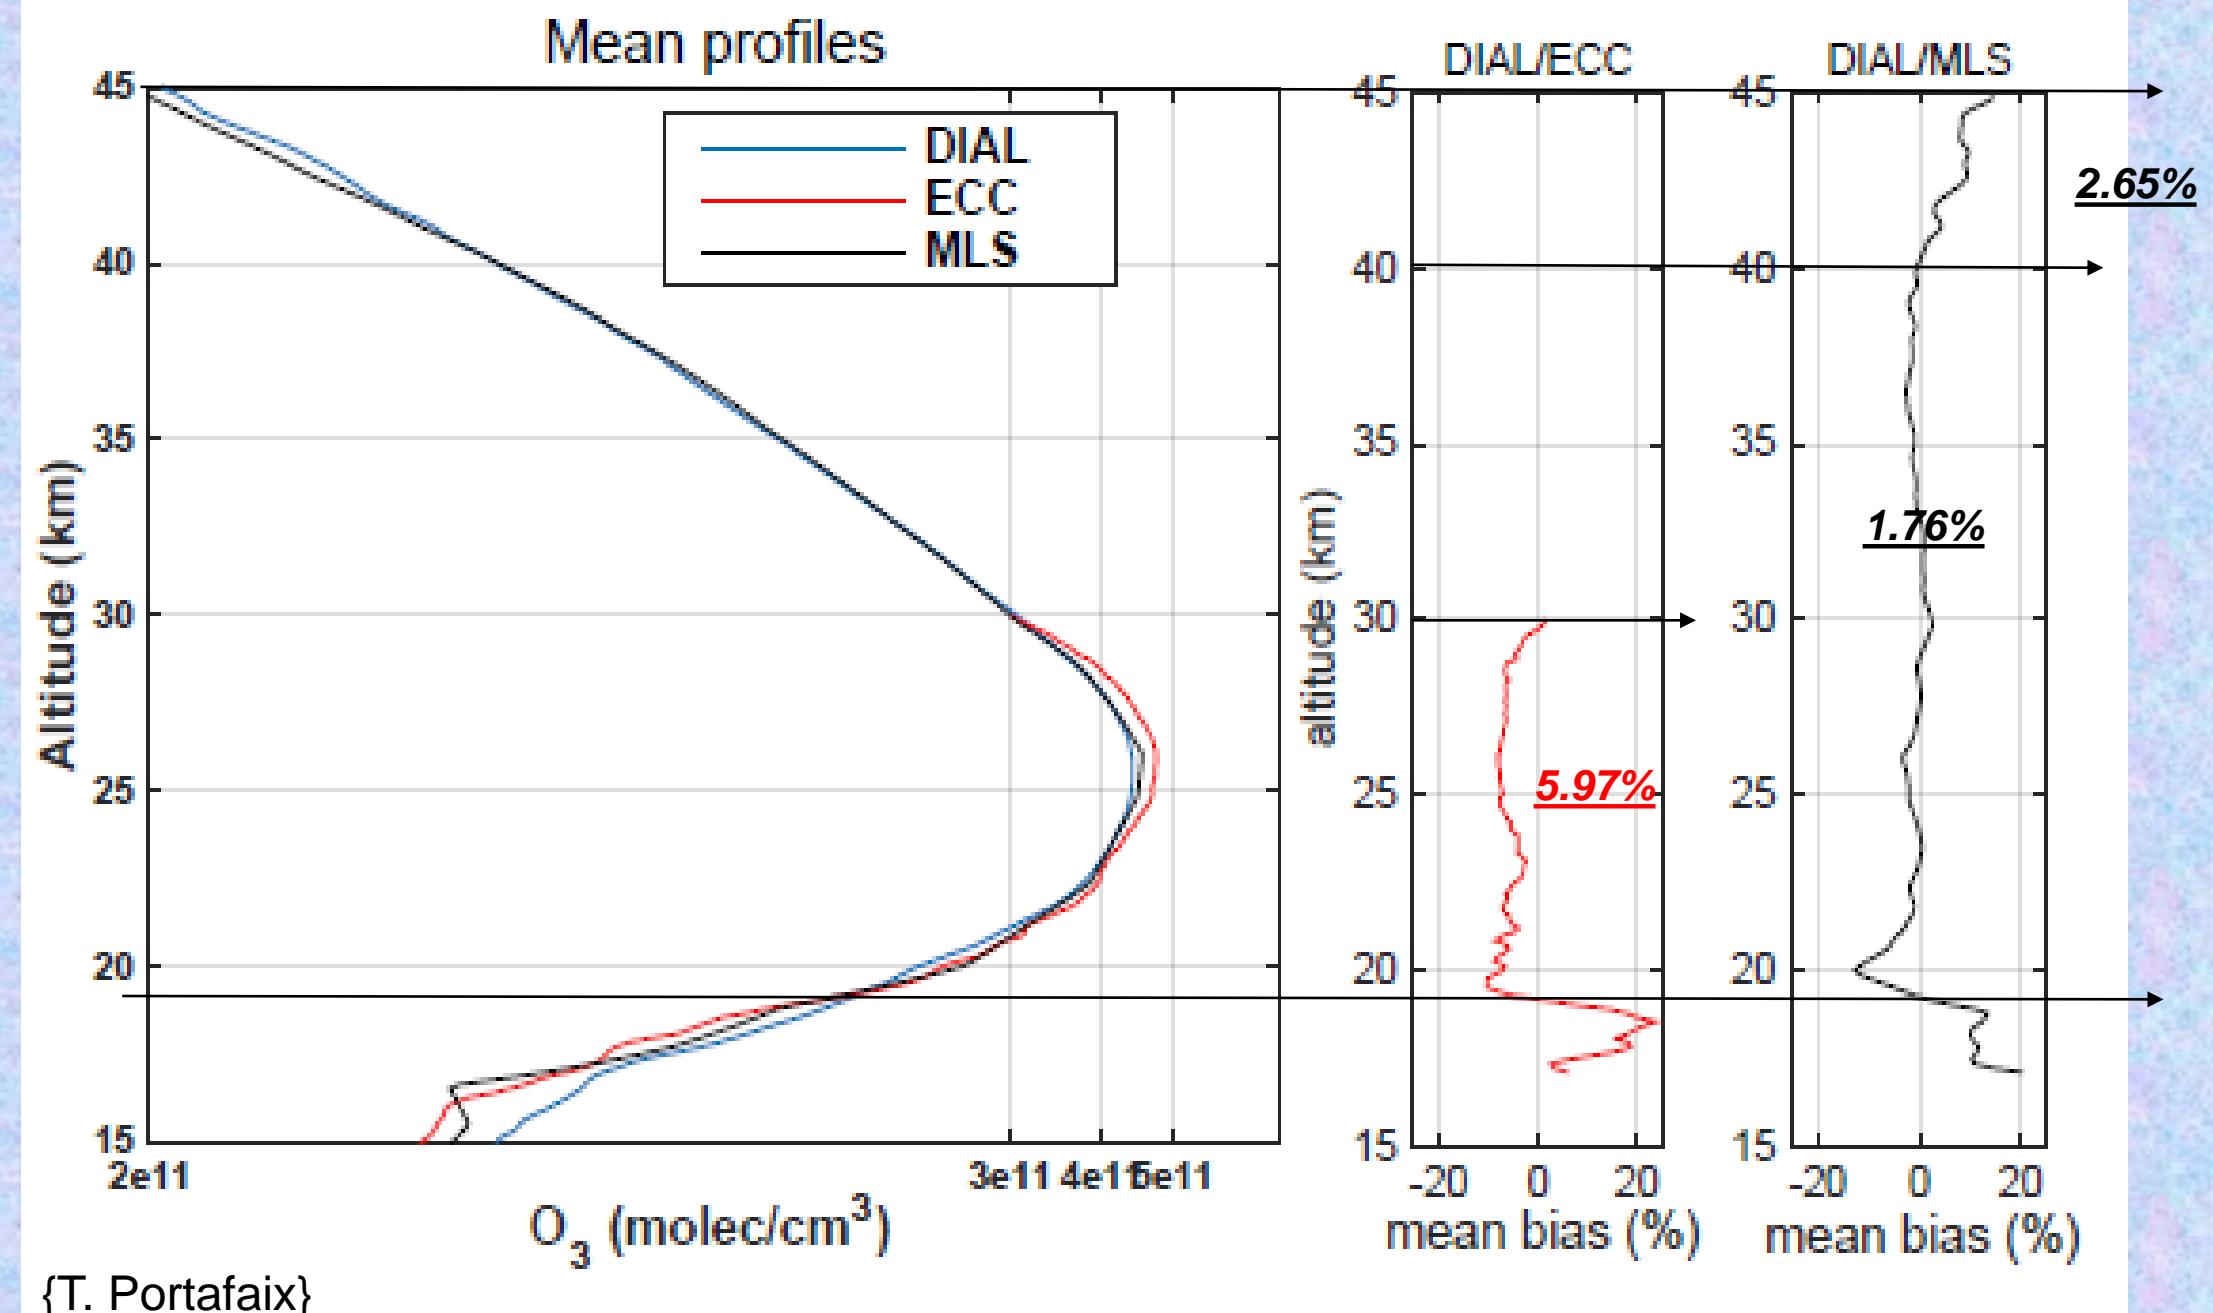

Left: mean ozone profiles (8): LiO3T and ECC +/- 1 sigma
Right: mean relative difference LiO3T/ECC +/- 1 sigma

Intercomparisons between Ozonesondes (ECC), Tropospheric (LiO3T) and Stratospheric (DIAL) lidars

Comparisons between individual profiles show a mean agreement from 10.8% to 19.4% in the troposphere and from 3.1% to 10.3% in the stratosphere

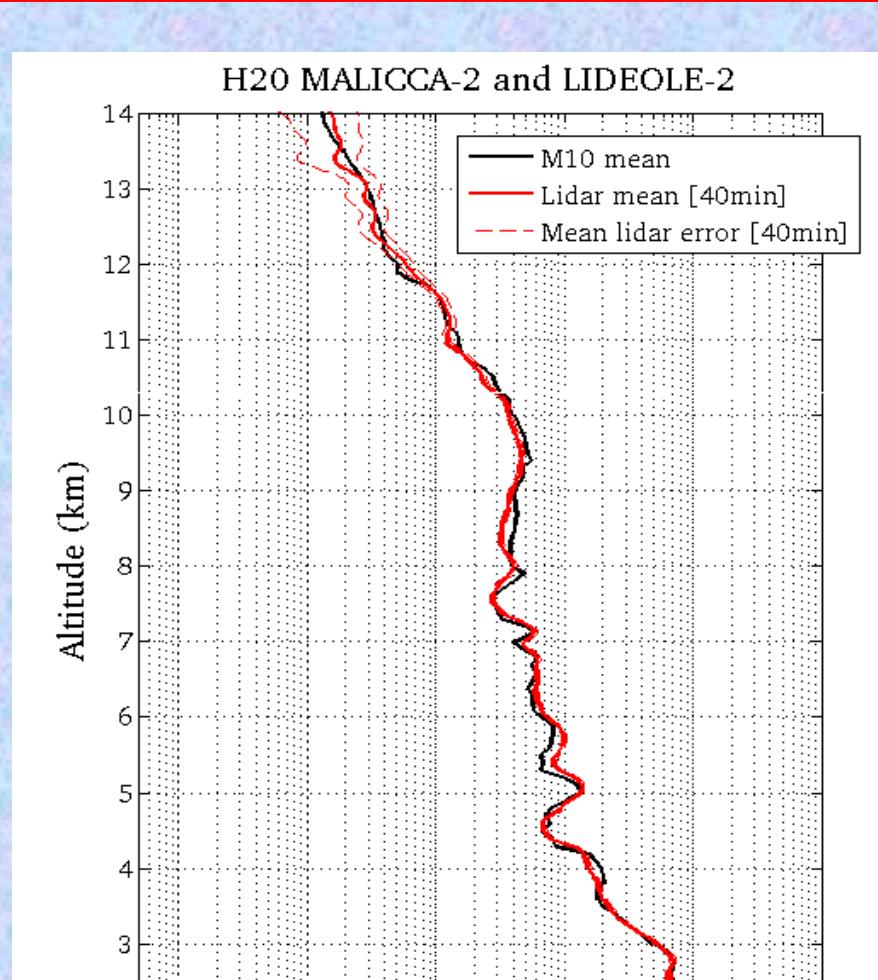

Comparison of the total ozone integrated column amount between the ozonesonde and OMI : from -6.0% to +5.9% and La Reunion SAOZ : from -4.0% to +4.1%

Between 17 and 20 km the stratospheric lidar's measurements were polluted by the presence of aerosols comming from Chili and due to Calbuco volcano eruption

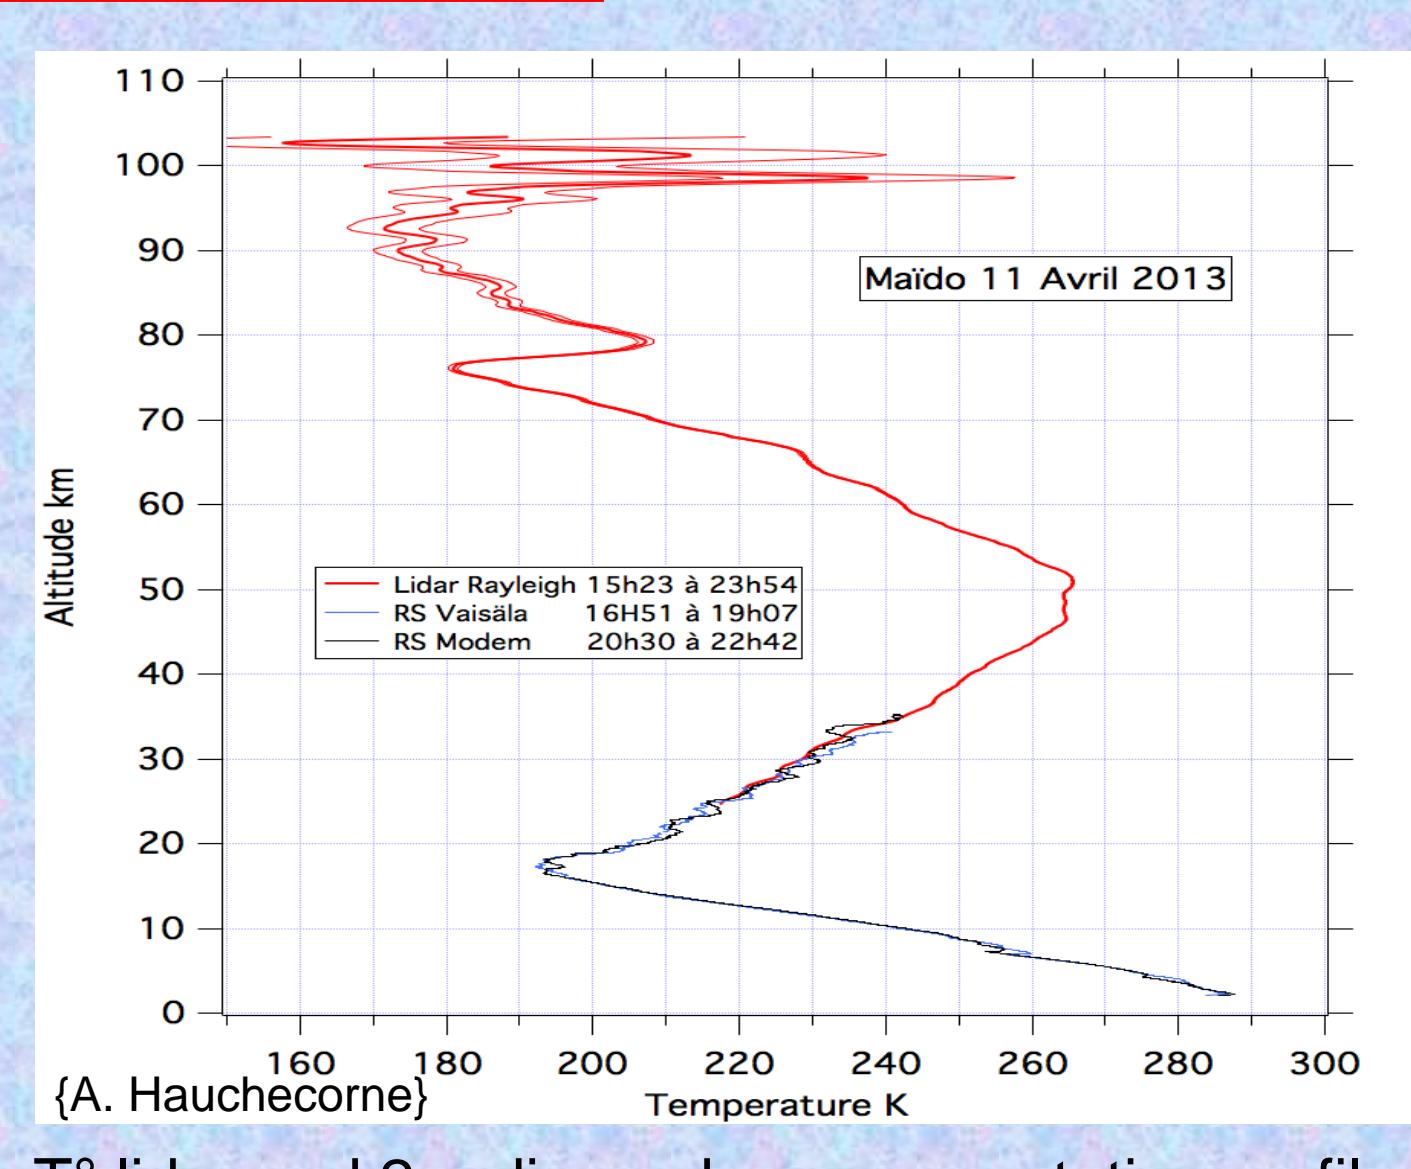

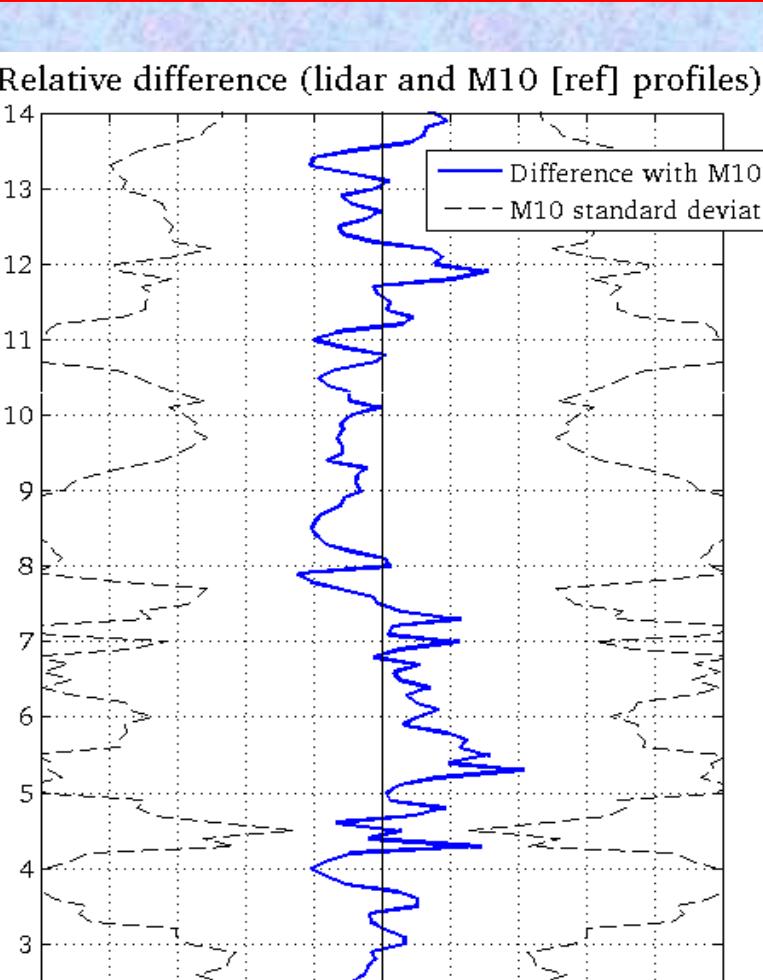

Mean profiles with 19 ECC, 45 DIAL and MLS between May and December 2015 (MORGANE campaign + NDACC routine measurements)

★ ANCILLARY COMPARISONS : Water Vapor , Temperature and zonal wind

Water vapor Raman Lidar1200 and 5 radiosondes Modem M10

T° lidar and 2 radiosondes representative profiles
